Construction moving full steam ahead at Genesis Grain & Fertilizer Belle Plaine SuperCenter

SASKATOON (April 30, 2021) – Construction is underway in Belle Plaine, Sask., at the fertilizer SuperCenter location planned by Genesis Grain & Fertilizer. The project, owned by more than 650 farmer-investors, brings a state-of-the-art fertilizer production facility that will advance the future of fertilizer distribution across Western Canada. The local investment in Canadian agriculture brings optimism to the industry during a time of adversity.

For Genesis investors, seeing concrete poured and wood beams going up this spring will be a welcome sight. It took considerable time and effort to keep the project moving forward while overcoming obstacles to get boots on the ground, including the COVID-19 pandemic. With barriers to construction being resolved, the Belle Plaine SuperCenter is seeing progress each day in earthwork and establishing construction systems. Marcus Construction is acting as the general contractor and has an extensive portfolio in agribusiness design and construction. As border closures endure, greater use is being made of local contractors and businesses to move the project forward—a benefit to both the southern Saskatchewan economy and the state of the SuperCenter.

“Although the project has experienced delays, Genesis is pleased today to announce the building of our SuperCenter is well underway. Working together with our construction partners Folk, Marcus, Sackett-Waconia and Clifton Engineering when the facility is commissioned, Genesis’s farmer-owners will have one of the most advanced fertilizer distribution centers in Western Canada,” says Jason Mann, Genesis’s President.

Located in the Moose Jaw to Regina corridor, the Belle Plaine SuperCenter is the first of a planned seven fertilizer facilities that will span the Prairie provinces. These facilities will not only benefit the farmer-investors involved but the greater farming community in Western Canada.
